Portable Media Hub for Your Mobile Devices

Strontium® Mobile WiFi Cloud is a portable media hub to stream media to your tablets and smartphones from storage media, such as SD cards, USB drives or external portable USB hard drives via a secure, wireless connection, no matter where you are! What's best, up to 5 users can access and share stored media content – simultaneously!

Free up valuable space on your mobile devices. With the Mobile WiFi Cloud you can now bring your whole collection of movies, music, photos and documents on-the-go and share them with all your wireless devices easily. Just insert your SD card, USB flash drive, or even your portable USB hard drive into the media hub and the built-in Wi-Fi connection allows you to share the content with up to 5 iOS, Android, or laptop devices* within range via a dedicated APP. In addition, it allows you to backup your data on mobile devices to the media hub to free up valuable storage space for content-intensive applications such as games and email. Now you can enjoy any music and videos when you are outside with your friends or easily share documents during business meeting without the worry of limited storage space.

Portable charger for smartphones and tablets. The Mobile WiFi Cloud has a built-in rechargeable 3000mAh battery which allows for up to 8 hours** of continuous usage. In addition, it can double up as a portable power bank if your mobile devices ever run low on juice.

Free Apps for iOS and Android devices. The free iOS and Android mobile app is equipped with search utility function to identify and navigate data files. The Mobile WiFi Cloud is also supported by a two-year warranty, free technical support and Strontium® reliability.
